

I'm Arbaz Ahmed, a second-year Computer Science student at VNR VJIEET with a CGPA of 9.50. I'm a passionate full-stack developer with experience in the MERN stack, and I love solving real-world problems through code.

I've built several full-fledged projects, including:

- **Anime Stream** – A high-performance anime streaming platform using Next.js, TypeScript, SSR/SSG, and HLS.
- **ChatApp** – A real-time chat application with one-on-one and group messaging using WebSockets.
- **YTWrap** – A video editing and publishing tool integrated with AWS S3, YouTube API, and OAuth.
- **BlogApp** – A blogging system with role-based access control and secure authentication.
- **Lost and Found** – A platform for tracking and recovering lost items with real-time updates.
- **Xcelifree** – A data visualization platform that processes Excel files using ExcelJS and Recharts.
- **Library Management System** – A production-ready app with Razorpay payments, WhatsApp API reminders, user/book management, and financial reporting.
- **Gamified Habit Tracker** – A habit-tracking app built in 24 hours at **Web-A-Thon**, which I won. It motivates users through gamification and progress streaks.
- **BG Remover** – A tool to remove image backgrounds with seamless **Razorpay** payment integration for premium usage.
- **Virtual AI Assistant** – A smart AI chatbot assistant built with the **MERN stack**, offering real-time responses and helpful utilities.

In addition to development, I've earned certifications in Python, C++, AI, Tableau, and cybersecurity. I've also contributed to open source during **Hacktoberfest 2024**, and I enjoy competitive programming with a **LeetCode rating of 1677** and top 3% ranking in CodeFrenzy.

I'm looking forward to bringing my skills into a collaborative internship where I can grow while making a real impact.
